AMELA Board Meeting
3/12/19

Meeting Time: 9:31pm – 9:55pm

Members Present:
      Gavin Kremer
      Clara Nguyen
      Zach Kaufman
      Kendall Haworth

Eli had other commitments but joined at the very end

Goal for this meeting:
      Make tv episodes/seasons clickable form the show page. Make media pages look better, populate production db, ease of access changes, begin media searching.

What was accomplished:
      Gavin fixed hardcoded urls in templates, made the root path bring users to the homepage, fixed user creation on admin page, and added comment sections to pages.

      Zach made tv shows list clickable episodes and added some movie details, and made our test database. Also changed some models to allow for longer comments, titles, etc.

      Kendall added tv shows and comments in database, and made root path redirect to streaming's root path.

      Clara made changes to navbar, media page, and media list and made the site beautiful

      Eli made navbar modular and made templates inherit from base templates.

      Group decided that next milestone will be implementing user pages and media playback.

Goals for next meeting:
      Get a skeleton user page up
      Familiarize with AWS on demand streaming
